RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Rita Paulin-Alexander

RE: Gateway Pacific Terminal EIS

Really? REALLY? More coal? Come on. The LAST thing we need is more coal—mining it, transporting it, burning it, exporting it—anything to do with coal—is unconscionable. STOP! None of this acceptable. Coal is a dirty, polluting, climate-changing industry whose time has come to phase it out—QUICKLY. Any efforts to increase or expand coal production is irresponsible to the maximum degree. And now, the following form letter I have read and agree with: The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Stan Hoobing

However, we must be responsible to future generations regarding the earth they have to live in. During most of the earth's history people have not had anything close to the easy living we now enjoy, but their living habits were not in conflict with the earth's sustainability or their health. We are destroying the earth even as most of the world's population doesn't enjoy what we see as a good standard of living. We could have fulfilling lives with much less economically and while taking into account the earth's well-being. We MUST start thinking and making changes, before it's too late!

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Gifford Studley  
Moscow, ID 83843

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. I live 10 miles from Sandpoint through which these trains now travel. Considering all the rhetoric about "energy independence" why would we use so much energy to ship our energy overseas at the expense of our citizenry?

Sincerely,

Randy Parker

RE: Gateway Pacific Terminal EIS

Our communities here in Idaho would be adversely affected by the proposed Coal Trains that would cross our state 24 hours a day. The train traffic could impede the use of roads at rural traffic crossings, making the Emergency Services provided by police, fire departments and ambulance services hard to provide in a timely manner, due to delays at blocked rail road crossings. The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Mike Busby

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Catherine Langan

RE: Gateway Pacific Terminal EIS

I love my home for its beauty and lack of pollution. The Sandpoint area is a growing tourism area that bases its popularity on its pristine surroundings, clean air and unmatched beauty. Increased coal transports work in opposition to this reputation and would increase the potential for more noise and air pollution. As a travel writer, I know how devastating this would be to a community like Sandpoint, which thrives on its increasing popularity as a year-round vacation destination. More needs to be done as well, to ensure that air and water pollution is not a secondary outcome of this kind of commercial transport, especially since the rail would cross Lake Pend Orielle near bird nesting areas, and other wildlife resources. Please don't approve this proposal. We need to protect our local tourism and ecology. Jan Lee Travel Writer

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Christine zimmerman

RE: Gateway Pacific Terminal EIS

We people who live in the northern part of Idaho already have dangerous situations with the railway because most of the crossings are open with just a "stop" sign to warn of the oncoming train traffic. There are very few crossings with the arms that come down to stop traffic as the train approaches. Also, with increased train traffic, emergency vehicles would be stopped for several minutes while the train lumbered on with 118 coal cars in tow. This is a very dangerous situation for people who are in a life or death emergency trip to the hospital. If the train holds the vehicle up too long, the patient will die. Also, if we sell millions more tons of coal to the Chinese, they will burn it and it will increase global warming. The Chinese people already are being saturated with coal smoke. When they hang their washing outside, it gets black. This should be a warning as to what will happen to our environment all this coal is sold to China. We need to think about our earth instead of thinking about making more money by destroying it. The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal has no merit for the State of Idaho; I live near the Burlington-Northern rail line and would have coal dust polluting our air and land. Certainly, China and the rest of the world DOES NOT NEED more AIR POLLUTION - this horror of industry can already be seen from space! I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Dale sugg

RE: Gateway Pacific Terminal EIS

Sandpoint, Idaho is my community, & I oppose anything that could possibly cause environmental degradation through this beautiful, pristine area. I don't support dirty coal usage in the environment anyway, so therefore don't support coal usage, transport, or export for usage anywhere on the globe. I urge the Army Corp of Engineers to fully consider the environmental threats & impact posed to Idaho in particular, but also impacting all areas involved. I don't think that the benefits outweigh the 'negatives' of this decision. We need to be good stewards of the beautiful lands in which we reside! The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. We live in Shoshone, Idaho where the UP tracks run right down the middle of Main Street in our town, cutting the town in two. Such long trains would hold up traffic and commerce for hours daily, to say nothing of the mess that would be left behind. We don't want coal trains running through our town. And we don't want them passing through our farm ground, either, contaminating our food crops for the sake of making huge profits selling USA coal to China. We need to stop burning coal. We need to stop building mega ports on the West Coast to accommodate the global pocketbooks of the Coal Barons and the environmentally unsound manufacturing processes in China. We need passenger trains for human travel.

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement.

Sincerely,

Roy LEE

I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. It is my opinion that this is a very bad idea for Idaho. It seems just crazy on the face of it, to allow such heavy rail traffic of coal through a place like Sandpoint and Lake Pend Orielle, some of the most beautiful and pristine country in our state, and our nation. As a nation, we can think of better things to export than coal, really we can.

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal is a bad deal for Idaho. It would escalate climate change, increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. I am a resident of Idaho and don't want to see it suffer any more.

Sincerely,

Joel Fernandez  
Moscow, ID 83843

RE: Gateway Pacific Terminal EIS

The Gateway Pacific coal export terminal looks like the wrong end of the deal for Idaho. It would increase congestion and noise with more coal train traffic, pollute the air and local waterways, harm existing businesses, delay emergency responders, damage aquatic ecosystems and fishing grounds at the terminal site, and increase tanker traffic and the potential for serious shipping accidents. It would be loud and nasty, ruin sportsmen's fishing and really trash up the communities it would run through. It is an idea that is bad for the businesses and the residents of every town it would pass through. Worst of all, the taxpayers will be footing the bill. This is another example of corporate welfare, of the poor giving to the rich. I know that must sound pedantically socialist, but this is a crappy deal. Why would anyone want to pay to have a 79 Oldsmobile with a family of possums living in the trunk towed into their front yard and set up on cinderblocks? I urge you to consider all of these impacts from a quality of life perspective as well as one of impact to the ecosystem. Good luck with your Environmental Impact Statement.

Sincerely,

James Aydelotte

I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. Why would you even consider letting this much coal pass over one of the largest underground fresh water deposits in the northwest. One accident could make this water unuseable for countless people. Make a good decision and stop this now.

Sincerely,

Joseph Warren

I urge you to consider all of these impacts in the scope of your Environmental Impact Statement. There should be measures taken in any endeavor to not threaten our waterways, land and oceans. Please consider that we have one world that has no warranty. If we continue to allow business to take risky chances with our earth, we will end up in a situation that is not at all healthy for our children and grandchildren.

Sincerely,
