

Individuals Who Submitted through the Greenpeace Online Comment Form Stating:

"I strongly oppose the construction of a coal export terminal at Cherry Point, Washington and transporting strip-mined coal from Montana and Wyoming on trains and ships throughout the Northwest. This proposal would negatively affect my community by increasing congestion and noise with more coal train traffic, polluting our air and local waterways, harming existing businesses, delaying emergency responders, damaging aquatic ecosystems and fishing grounds at the terminal site, increasing tanker traffic and the potential for serious shipping accidents and escalating climate change. I urge you to consider these impacts in the scope of the Environmental Impact Statement.

There are currently five coal export proposals that would transport as much as 150 million tons through the Northwest. I urge the Army Corps of Engineers to conduct an area wide Environmental Impact Statement to assess the cumulative impact of these proposals."

Individuals Who Submitted through the Greenpeace Online Comment Form Stating:

"I strongly oppose the construction of a coal export terminal at Cherry Point, Washington and transporting strip-mined coal from Montana and Wyoming on trains and ships throughout the Northwest. This proposal would negatively affect my community by increasing congestion and noise with more coal train traffic, polluting our air and local waterways, harming existing businesses, delaying emergency responders, damaging aquatic ecosystems and fishing grounds at the terminal site, increasing tanker traffic and the potential for serious shipping accidents and escalating climate change. I urge you to consider these impacts in the scope of the Environmental Impact Statement.

There are currently five coal export proposals that would transport as much as 150 million tons through the Northwest. I urge the Army Corps of Engineers to conduct an area wide Environmental Impact Statement to assess the cumulative impact of these proposals."
