I/we live on an island in the Salish Sea, where coal ships would make over 950 transits per year if the Gateway Pacific Terminal were to be built. I/we request that the GPT Environmental Impact Statement include the entire coal transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

OIL/COAL SPILL RISKS: How will GPT's marine vessel traffic increase collision risks with tankers and other cargo ships in the area? What would be the effects on our region of a catastrophic oil and/or coal spill?

ATING & SAFETY: How might fishing recreational boating be affected by the nal capesize and Panamax coal ships ters? By how much will accident and increase?

ORCA, MARINE MAMMALS & BIRDS: How would the noise, pollution and physical presence of the additional huge vessels affect our orca populations? How would construction and operation of the coal port and the continuous transiting of coal ships affect other marine mammals, fish, birds, and the food web that supports them?

SALMON & FISHERIES: How would construction and operation of the coal port; up to 100 acres of pulverized coal in open, near-shore storage; and the coal ships themselves (size, pollution, noise, anchor dragging, etc) impact the crab, herring and salmon fisheries?

TOURISM & OTHER ECONOMIC COSTS: How would lost beauty, decreased orca populations, damaged fisheries and more crowded waterways affect our tourism industry? How would property values be affected? How much will we, the taxpayers, ultimately pay for costs directly and indirectly associated with GPT?

AL CONCERNS HERE:

Isanna Kellogg 10.27.12 Alan Alberg, Susanna Kellogg

Date: Signature(s):

I/we live within 1 mile of the BNSF rail line on which up to 18 additional daily coal trains (9 full, 9 empty) would travel, if the Gateway Pacific Terminal were built. I/we request that the GPT Environmental Impact Statement encompass the entire transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

NOISE: How will the noise and vibrations of unusually long, heavy and frequent trains impact property values and the structural integrity of homes and other buildings close to the tracks? How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

I/we live within 1 mile of the BNSF rail line on which up to 18 additional daily coal trains (9 full, 9 empty) would travel, if the Gateway Pacific Terminal were built. I/we request that the GPT Environmental Impact Statement encompass the entire transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

NOISE: How will the noise and vibrations of unusually long, heavy and frequent trains impact property values and the structural integrity of homes and other buildings close to the tracks? How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

I/we live on an island in the Salish Sea, where coal ships would make over 950 transits per year if the Gateway Pacific Terminal were to be built. I/we request that the GPT Environmental Impact Statement include the entire coal transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

OIL/COAL SPILL RISKS: How will GPT's marine vessel traffic increase collision risks with tankers and other cargo ships in the area? What would be the effects on our region of a catastrophic oil and/or coal spill?

BOATING & SAFETY: How might fishing and recreational boating be affected by the additional capesize and Panamax coal ships in our waters? By how much will accident and collision rates increase?

ORCA, MARINE MAMMALS & BIRDS: How would the noise, pollution and physical presence of the additional huge vessels affect our orca populations? How would construction and operation of the coal port and the continuous transiting of coal ships affect other marine mammals, fish, birds, and the food web that supports them?

SALMON & FISHERIES: How would construction and operation of the coal port; up to 100 acres of pulverized coal in open, near-shore storage; and the coal ships themselves (size, pollution, noise, anchor dragging, etc) impact the crab, herring and salmon fisheries?

TOURISM & OTHER ECONOMIC COSTS: How would lost beauty, decreased orca populations, damaged fisheries and more crowded waterways affect our tourism industry? How would property values be affected? How much will we, the taxpayers, ultimately pay for costs directly and indirectly associated with GPT?

How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

I/we live on an island in the Salish Sea, where coal ships would make over 950 transits per year if the Gateway Pacific Terminal were to be built. I/we request that the GPT Environmental Impact Statement include the entire coal transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

OIL/COAL SPILL RISKS: How will GPT's marine vessel traffic increase collision risks with tankers and other cargo ships in the area? What would be the effects on our region of a catastrophic oil and/or coal spill?

BOATING & SAFETY: How might fishing and recreational boating be affected by the additional capesize and Panamax coal ships in our waters? By how much will accident and collision rates increase?

ORCA, MARINE MAMMALS & BIRDS: How would the noise, pollution and physical presence of the additional huge vessels affect our orca populations? How would construction and operation of the coal port and the continuous transiting of coal ships affect other marine mammals, fish, birds, and the food web that supports them?

SALMON & FISHERIES: How would construction and operation of the coal port; up to 100 acres of pulverized coal in open, near-shore storage; and the coal ships themselves (size, pollution, noise, anchor dragging, etc) impact the crab, herring and salmon fisheries?

TOURISM & OTHER ECONOMIC COSTS: How would lost beauty, decreased orca populations, damaged fisheries and more crowded waterways affect our tourism industry? How would property values be affected? How much will we, the taxpayers, ultimately pay for costs directly and indirectly associated with GPT?

Polly MAY Thomas

Name(s): Polly May Thomas 11/5/12 Date: Signature(s): Polly May Thomas

I/we live within 1 mile of the BNSF rail line on which up to 18 additional daily coal trains (9 full, 9 empty) would travel, if the Gateway Pacific Terminal were built. I/we request that the GPT Environmental Impact Statement encompass the entire transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

NOISE: How will the noise and vibrations of unusually long, heavy and frequent trains impact property values and the structural integrity of homes and other buildings close to the tracks? How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

I/we am concerned about the continued vitality of the Salish Sea, where coal ships would make over 950 transits per year if the Gateway Pacific Terminal were to be built. I/we request that the GPT Environmental Impact Statement include the entire coal transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

OIL/COAL SPILL RISKS: How will GPT's marine vessel traffic increase collision risks with tankers and other cargo ships in the area? What would be the effects on our region of a catastrophic oil and/or coal spill?

BOATING & SAFETY: How might fishing and recreational boating be affected by the additional capesize and Panamax coal ships in our waters? By how much will accident and collision rates increase?

ORCA, MARINE MAMMALS & BIRDS: How would the noise, pollution and physical presence of the additional huge vessels affect our orca populations? How would construction and operation of the coal port and the continuous transiting of coal ships affect other marine mammals, fish, birds, and the food web that supports them?

SALMON & FISHERIES: How would construction and operation of the coal port; up to 100 acres of pulverized coal in open, near-shore storage; and the coal ships themselves (size, pollution, noise, anchor dragging, etc) impact the crab, herring and salmon fisheries?

TOURISM & OTHER ECONOMIC COSTS: How would lost beauty, decreased orca populations, damaged fisheries and more crowded waterways affect our tourism industry? How would property values be affected? How much will we, the taxpayers, ultimately pay for costs directly and indirectly associated with GPT?

How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

I/we live ~~within 1 mile of~~ NEAR **the BNSF rail line** on which up to 18 additional daily coal trains (9 full, 9 empty) would travel, if the Gateway Pacific Terminal were built. I/we request that the GPT Environmental Impact Statement encompass the entire transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

NOISE: How will the noise and vibrations of unusually long, heavy and frequent trains impact property values and the structural integrity of homes and other buildings close to the tracks? How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? I/we am concerned about the continued vitality of the Salish Sea, where coal ships would make over 950 transits per year if the Gateway Pacific Terminal were to be built. I/we request that the GPT Environmental Impact Statement include the entire coal transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

OIL/COAL SPILL RISKS: How will GPT's marine vessel traffic increase collision risks with tankers and other cargo ships in the area? What would be the effects on our region of a catastrophic oil and/or coal spill?

BOATING & SAFETY: How might fishing and recreational boating be affected by the additional capesize and Panamax coal ships in our waters? By how much will accident and collision rates increase?

ORCA, MARINE MAMMALS & BIRDS: How would the noise, pollution and physical presence of the additional huge vessels affect our orca populations? How would construction and operation of the coal port and the continuous transiting of coal ships affect other marine mammals, fish, birds, and the food web that supports them?

SALMON & FISHERIES: How would construction and operation of the coal port; up to 100 acres of pulverized coal in open, near-shore storage; and the coal ships themselves (size, pollution, noise, anchor dragging, etc) impact the crab, herring and salmon fisheries?

TOURISM & OTHER ECONOMIC COSTS: How would lost beauty, decreased orca populations, damaged fisheries and more crowded waterways affect our tourism industry? How would property values be affected? How much will we, the taxpayers, ultimately pay for costs directly and indirectly associated with GPT?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?

HUMAN HEALTH & SAFETY: How will cancer, heart disease, asthma and other health risks be affected by air and water pollutions associated with coal transport and export? How will additional rail and ship traffic affect accident and collision rates? Toxic air pollution crosses the Pacific Ocean from Asia to the west coast of the United States; what would be the local public health impacts of Powder River Basin coal combustion in Asia?

COST TO TAXPAYERS: How much will we, the taxpayers, ultimately pay for costs affiliated with coal transport and export? Will such direct and indirect costs include necessary upgrades and additions to rail infrastructure; safety measures; public health expenses; the building of under- and overpasses and other attempts at mitigating adverse impacts; lost local businesses and jobs; damaged tourism trade; and decreased property values?

DANA KERSHNER JAN-21-13

Name(s): Date: Signature(s):

I/we live within 1 mile of the BNSF rail line on which up to 18 additional daily coal trains (9 full, 9 empty) would travel, if the Gateway Pacific Terminal were built. I/we request that the GPT Environmental Impact Statement encompass the entire transportation corridor so that communities along the rail and marine routes are given due consideration. Questions that concern me, and which objective, rigorous and comprehensive studies should address include:

NOISE: How will the noise and vibrations of unusually long, heavy and frequent trains impact property values and the structural integrity of homes and other buildings close to the tracks? How will chronic noise exposure affect the health and quality of life of people living, working, and playing nearby?

TRAFFIC PROBLEMS: How will the coal trains affect motor vehicle traffic, transportation, emergency vehicle response times and the flow of commerce in communities along the rail corridor?

FISHERIES & THE SALISH SEA: How will tourism; boating; collision risks; oil/coal spill risks; salmon, crab and herring fisheries; orca whales; and the general beauty, vitality, and livability of the Salish Sea and environs be affected by coal port construction and operations, and by the over 950 annual transits of immense coal ships?
